

# XStore - Responsive WooCommerce Theme

created: 04/13/2016 by: 8theme ()

## Dear customers!

We strongly recommend to read this documentation attentively to save your time during further setting up of our theme.

## General Information

Dear customers, we appreciate that you have chosen our theme! XStore - is an elegant and neat theme outside, at the same time with a powerful admin module inside. All the 8theme software products are developed with quality and distinguished not only by programming level but also by the effective teamwork of customer support in the process of theme using. Before theme installation and its use, we recommend firstly to examine the documentation in details, watch the video tutorials and look through the forum topics according to the questions you're interested in.

### 1.1. XStore Theme Requirements

Before using XStore theme you need to be sure that your server and WordPress meets theme requirements. Theme requires at least **WordPress version 3.9+**. Such problems as white screen after theme installation, out of memory errors, fails when import demo content etc, as a rule, are related to server settings and low PHP configuration limits. Change them by yourself or contact your hosting provider and ask to increase limits to a minimum as follow:

- **file\_get\_contents() function** should be enabled in the server configuration;
- **PHP version:** 5.3 or higher;
- **max\_execution\_time:** no less than 180;
- **memory\_limit:** no less than 128M;
- **upload\_max\_filesize:** no less than 40M.

Use WordPress phpinfo plugin (<https://wordpress.org/plugins/wordpress-php-info/>) to check your PHP configuration limits.

### 1.2. Support

Due to Envato Item Support Policy ([http://themeforest.net/page/item\\_support\\_policy](http://themeforest.net/page/item_support_policy)), we provide theme support for 6 months from the purchase date. It means during those 6 months we aim to help our clients if they need additional information about the theme's options and features or have any unresolved difficulties with the template. For this reason, the support team is at your service. But we are not able to provide support for code customization or third-party plugins! If you need advice about anything other than minor template customization, want to implement new functions or make the theme compatible with third-party plugins we recommend to request developer help. Also, you'll have the option to purchase extended item support, increasing the item support period up to a maximum of 12 months from the date of purchase. You can find detailed information on ThemeForest ([http://themeforest.net/page/item\\_support\\_policy](http://themeforest.net/page/item_support_policy)).

To be helpful we prefer you contact us on Support Forum (<http://www.8theme.com/forums/>):

- Create an account or login to existing one;
- Be sure you added theme purchase code on My Account page (<http://www.8theme.com/my-account/>) (*information about what purchase code is and where to get it read here (<http://www.8theme.com/blog/purchase-code-where-to-download/>)*). Theme support is offered to verified customers only.
- Navigate to theme forum and press Create Topic button.

We would be very grateful if you use ThemeForest comments for presale requests only or questions that are not related to support. If you have a critical problem and really need to give us access to your account you can contact us by using a contact form on our profile's page on ThemeForest <http://themeforest.net/user/8theme> (<http://themeforest.net/user/8theme>) - at the bottom of the right sidebar.

## Installation & Upgrade

### 2.1. Theme Package

After theme purchase, please, download the theme from ThemeForest. For that, you need to enter Downloads area in your account on ThemeForest, where you will see all your purchased themes. Find XStore template among them and click on the Download button on the right from the main content. In the provided list you will see the opportunity to download the whole theme package with all additional files or the theme .zip file directly.

If you have downloaded the whole theme package, you will find there the following files after extracting:

- XStore\_Theme\_v.x.x.zip file which is the WordPress theme
- Translation files folder
- Documentation folder
- PSD folder
- Files for import
- xstore-child theme folder

### 2.2. Theme Installation

Watch our video tutorial how to install theme

([https://www.youtube.com/watch?v=bHE\\_UhSJM10](https://www.youtube.com/watch?v=bHE_UhSJM10))

You can install the theme in two ways.

#### Method 1 – WordPress admin dashboard

- Navigate to *Appearance > Themes > Add New*.
- Choose XStore\_Theme\_v.x.x.zip file. Press the Install Now button to upload and install the theme

## Method 2 – FTP

- Connect to your server via FTP software.
- Extract XStore\_Theme\_v.x.x.zip file and upload only extracted **xstore** folder to /wp-content/themes/ folder on your server.
- Navigate to *Appearance > Themes* and activate xstore theme.

If you get an error: Are you sure you want to do this? This usually occurs when either the PHP memory limit or max post size for WordPress has been reached. Read *1.1. xstore Theme Requirements*. The easiest workaround for this is to install theme through FTP (see above). Alternatively, you'll need to change a number of settings either on WordPress or on your web host.

## Included plugins

XStore theme includes a number of perfect plugins that greatly increase the theme opportunities and open new horizons. The installation of plugins will be required once after the theme activation.

Install and Activate them. In case if automatic plugin installation fails (as a rule it is because of your server settings), you can install them manually via your Dashboard: Plugins > Add New > Upload Plugin > Browse plugins archives. Or via FTP, by uploading and extracting the plugin zip files into wp-content/plugins folder. You can find the zip files for plugin installation in the theme folder xstore/theme/plugins. Detailed information about plugins you can find in item *3. Plugins* of this documentation.

## 2.3. Theme Upgrade

Nothing stands still, the updates for WP and plugins are constantly released and they are included in our template. We supplement our theme with new features and fix all the issues. Because of this our team regularly updates theme. We recommend you always to use the last theme version to avoid the issues with incorrect template functioning. While the theme update the theme files will be rewritten and if you made any changes directly in them, these changes will be lost. So, if you are planning to customize your template, we insistently advise you to use Child Theme or Custom CSS area in Theme Options in case your changes affect only CSS styles. The theme update affects only the theme files and does not influence the database. But, to avoid any difficulties, please, do the backup of theme files and database before any update.

### Follow the steps below to update theme through FTP:

1. Download the zipped package from ThemeForest and extract to your desktop.
2. In the extracted package you will find archive XStore\_Theme\_v.x.x.zip, which is the WordPress theme.
3. Extract zip file and upload only extracted xstore folder to /wp-content/themes/ folder on your server with overwriting.
4. Check if you use the latest version of XStore Core plugin. Update, also, this plugin if your version is not up to date.

### Update using Envato Market (Automatic Updates)

Envato Market is a plugin for automatic WordPress theme updates that provides fast, efficient updates to keep your theme bug free and compatible with the latest version of WordPress. Visit the Envato Market Github page (<http://envato.github.io/wp-envato-market/>) to download the plugin zip file.

1. Before you install the plugin, you should request your Envato API token (<https://build.envato.com/create-token/?purchase:download=t&purchase:verify=t&purchase:list=t>).
2. Install and activate it like any other plugin. A new menu item, "Envato Market," will appear in the admin sidebar. Click on the sidebar link and enter your marketplace username and secret Envato API Personal Token. Click "Save Settings." All of your theme purchases will now appear on this page after it refreshes.
3. The plugin will now alert you to theme updates – so long as you check the toolkit settings regularly. Click on "install automatically" beside of your theme to automatically update them.

### Update using Easy Theme Update plugin

You may also use Easy Theme Update plugin (<http://wordpress.org/extend/plugins/easy-theme-and-plugin-upgrades/>) to backup your theme and upload the new version.

Please, re-save your XStore options after upgrading the theme. Navigate to *admin panel > Theme Options* and hit Save changes.

## 2.4. Demo Content

To make settings up your site easy and faster you may import demo content. There are two ways you can import xstore Theme Demo Content:

- One-click installation
- Default import of .xml files

## One Click Installation

This way allows you to import pages, posts, projects, slider, simple menu, theme versions or additional pages from our demos. You need to import Base demo content first before proceeding to theme versions import. To import our demo content follow the steps below:

- Install and activate required and recommended plugins before you proceed.
- Go to *Theme Options > Import/Export > Dummy Content* and select *Base content* to import posts, projects, products and simple menu. Press install *Base Content* button.
- Wait a moment when you'll see Success message and install version you like.
- Now you may regenerate demo images into the appropriate sizes for various areas. Install Regenerate Thumbnails plugin (<https://wordpress.org/plugins/regenerate-thumbnails/>), navigate to *Tools > Regenerate Thumbnails* tab and Regenerate All Thumbnails. It can take a few minutes depending on server speed and number of images you have.

## .XML files import

If you don't want to import all of our dummy content or just need separate pages from our demo, also if you can't use one click import according to server settings *Import of .XML files* is your way. We included all the demo versions and additional pages import to XML Files folder of theme package. There you'll be able to see theme .xml files, Revolution slider archive files. xstore Theme Options can also be imported by copying the text file and pasting its content into the Import from file field on the Import/Export tab in xstore Theme Options.

**Important:** Images you get after demo content import can neither be used on a live site nor redistributed. If you want to find out where images came from to buy the license use image search engine <https://www.tineye.com/> (<https://www.tineye.com/>).

## Plugins

### 3.1. General Info

First of all, we would like to specify that we do not guarantee the compatibility of our theme with all the third-party plugins for WordPress. Our template is fully compatible only with the plugins that are included in our theme and also WPML plugin. You often (not always) need to customize the extension to make it work properly with your theme. It's impossible for theme author to make the theme compatible with all existing extensions. Please, take that into your consideration and treat with understanding!

### 3.2. Included plugins

XStore theme includes the following plugins:

#### Required plugins

- XStore Core - plugin that includes additional functionality of XStore theme (Portfolio, Testimonials, Static Blocks etc).
- Custom Metaboxes and Fields for WordPress - plugin that enables 8theme Layout Options for Pages, Posts.
- Redux Framework - plugin that enables Theme Options module.
- Revolution Slider (<https://revolution.themepunch.com/>) - plugin to create awesome sliders.
- WPBakery Visual Composer (<http://vc.wpbakery.com/>) - page builder.
- WooCommerce - for selling online.

#### Recommended plugins

- Contact Form
- GMAPS for VC (<http://workingwithpixels.com/gmaps-for-visual-composer>)
- Cookie Notice
- MailChimp
- Wishlist

As we are not developers of all these plugins, you may find on their developers' websites all the setup information and documentation for them.

### 3.3. Update

Plugins authors regularly release the updates and in order to use all the features or fix already found issues, we recommend you to follow the plugins versions and update them on your installations. To update the plugins, switch to your server with FTP. Copy extracted plugins folders into wp-content/plugins/ folder

### 3.4. Activation and Purchase Codes

All the plugins included in our theme are external and we have the right to build them into our theme as we purchase the Extended License for each of these plugins. The plugins run perfectly and are fully functional. Keep in mind, we are constantly including the plugin updated versions and while every theme update you may find the actual plugin version in the theme folder. There is no doubt that you can get the current plugin version directly from us. For that, it will be enough to login to your account on our site ( <http://www.8theme.com/my-account/> ( <http://www.8theme.com/my-account/> ) ), then go to <http://www.8theme.com/download-plugins/> ( <http://www.8theme.com/download-plugins/> ) page, enter your purchase code and you'll get access to all necessary archives. These plugins registration is not obligatory! The plugins are functioning perfectly without any activation. The plugin activation option was added in the plugin only for the customers to get automatic updates and support directly from plugin developers. Only in case you need this features, you will need to purchase and register the plugin. This is not only our practice but all the theme authors from ThemeForest.

## Theme Settings

XStore theme is managed through settings called 8Theme Options and 8theme Page Layout. 8Theme Options are located in *Dashboard > 8theme Options* and contain settings organized into logical tabbed sections. These are global options for your website. If you want to set specific options for a particular page, post or product set them in 8theme Layout settings, which have a higher priority and are located in every page/post/product.

### 4.1. General Theme Options

**General** - You can set up some general options for your site in this section. Includes: Layout, Header Type, Header Settings, Breadcrumbs, Footer, 404 Page, Facebook Login, Share buttons settings.

**Styling** - These options allow you to set custom colors for all the elements around the site. Includes: Content, Navigation, Footer, Copyrights, Custom CSS settings.

**Typography** – You can set up fonts for your website.

**E-Commerce** – Here you can find all the e-commerce settings of our theme. Includes: Shop, Categories, Product Page Layout, Single Product Page, Quick View, Promo Popup

**Blog and Portfolio** – You can set up options related to blog and portfolio in this section. Includes: Blog Layout, Single Post, Portfolio settings.

**Import/Export** – This section allows to install Dummy content or move settings from theme options between themes or when you move your website from the test site to live. Includes: Dummy Content, Import/Export of Theme Options.

## 4.2. 8theme Page/Post Layout settings, 8theme Post Options

### 8theme Page/Post Layout settings

[8theme] Layout options

**Custom logo for this page**   
Upload an image or enter an URL.

**Breadcrumbs Style**

**Page slider**   
*Show revolution slider instead of breadcrumbs and page title*

**Use custom footer for this page**

**Custom background image**   
Upload an image or enter an URL.

**Custom background color**

**Custom logo for this page/post**   
Upload an image or enter an URL.

**Custom navigation for this page/post**

**Widget Area**

**Sidebar Position**  Default  
 Without  
 Left  
 Right

**Sidebar width**  Default  
 1/6  
 1/4  
 1/3

**Custom logo for this page/post** – You can upload the custom logo that will be visible on this page/post only.

**Sidebar Position** – Select position of sidebar if you need it different from selected in global 8Theme Options.

**Widget Area** – Allows you to choose what widget area you want to display. You may use even the custom one.

**Sidebar width** – Set width of the sidebar on this page/post.

**Custom navigation for this page/post** – If you want to use the navigation different from the main one use this option.

**One page navigation for this page/post** – If you want to use one-page navigation to scroll by section use this option.

**Breadcrumbs Style** – If you need to use breadcrumbs type different from the global one this option is for you. Use Featured image to upload breadcrumbs background (for page only).

**Breadcrumbs Effect** – If you need to use breadcrumbs effect different from the global one this option is for you.

**Page slider** – Allows you to use full width slider instead of page heading.

**Use custom footer for this page/post** – This option allows you to select custom footer for this page. Use Static Block to create the custom footer.

**Custom background image** – Allows you to use the background image.

**Custom background color** – Allows you to set the background color.

## 8theme Post Options

Also, there are some options available for posts only.

[8theme] Post Options

**Post template**

**Hide featured image on single**

**Hide share buttons**

**Post featured video (for video post format)**   
*Paste a link from Vimeo or Youtube, it will be embedded in the post*

**Soundcloud audio shortcode (for audio post format)**

**Quote (for quote post format)**

**Primary category**

**Post template** – Select size and position of featured image;

**Hide featured image on single** - check this option in case you need to hide featured image for some post only;

**Hide share buttons** - check this option in case you need to hide share buttons for this post only;

**Post featured video (for video post format)** - use to show video instead of featured image on single post page if *Video* post format is selected;

**Soundcloud audio shortcode (for audio post format)** - use to show audio instead of featured image on single post page if *Audio* post format is selected;

**Quote (for quote post format)** - use to show quote with featured image if *Quote* post format is selected;

**Primary category** - if the posts have multiple categories, the one selected will show up in blocks.

## 8theme Product Options

Detailed information about XStore product options you can find in *8. E-Commerce* item of this documentation.

### 4.3. XStore Shortcodes

There are several shortcodes which can be used in xstore theme inside posts and pages.

- **[alert]** insert the alert block with custom title and message;
- **[base\_url]** the path for WordPress folder;
- **[block id= " " ]** inserts static block;
- **[blockquote]** inserts the blockquote;
- **[button]** inserts the button;
- **[dropcap]** inserts dropcap;
- **[googlechart]** inserts chart with assigned attributes;
- **[googlefont]** shortcode to set google font for headings;
- **[checklist]** inserts the unordered list. Should be used together in a specific order;
- **[portfolio]** inserts Recent Projects slider;
- **[qrcode]** inserts the qrcode;
- **[share]** inserts social icons (facebook, twitter, mail, pinterest, google+);
- **[template\_url]** the path for template folder;
- **[toggle\_block][toggle]** shortcodes to create block with toggles. Should be used together in a specific order;

Also, you can use visual editor

### 4.4. Static Blocks

Static blocks is a great theme feature that makes adding content to your site easy and convenient. Static blocks allow you to add additional content for product, create footer layout, facilitate creation of promo popup etc. Static blocks can be used anywhere on your site to display text, images, sliders, widgetised sidebars etc. Go to *Dashboard > Static Block > Add new* and you'll be able to compose block layout in no time.

**Important:** If you want to use Visual Composer to build block layout don't forget to select it in Visual Composer settings.

If you want to display static block using shortcode you will need Static Block ID. You can find it in the url of your static block while edit it. See image below

## 4.5. Widgets & Custom Widget Areas

There are 17 default widget areas, which you can use to add your own content and functionality (*Appearance > Widgets*):

- **Main sidebar** - Default sidebar of all the pages and posts.
- **Left side top bar area** - Sidebar that appears at the left side of the top bar. You can use it for language switcher as well as for share buttons or tel number.
- **Right side top bar area** - Sidebar that appears at the right side of the top bar. You can use it for language switcher as well as for share buttons or tel number.
- **Mobile side top bar area** - Sidebar that appears on mobile devices only when you click on the main menu.
- **Top panel** - Sidebar that appears at the top of the site. You can use it to add additional information about your store or other.

- **Shop sidebar** - Sidebar that appears on Shop page
- **Filters area** - Area that appears on Shop page, above the products. Is hidden by default and could be opened if you click Filter button.
- **After products** - Area that appears on Shop page below the products.

Top panel	Footer Column 3
Shop Sidebar	Footer Column 4
Shop filters	Footer Copyrights Left
After the products	Footer Copyrights Right
Single product page Sidebar	featured products

Custom Sidebar

Add Sidebar

## Pages

Pages are almost the main element while creating the site. They are intended for static content, that's why pages are a good way to publish information that doesn't change much. You can create any number of pages with content. XStore theme includes 2 additional page layouts - Blank Page and Portfolio - to create specific pages.

## 5.1. New Page

To get started adding a new page to your site navigate to *Dashboard > Pages > Add new*. Add the title of the page. If you have pretty permalinks set up, the title of your page will also be the URL slug. Next, add some content. We recommend using Visual Composer editor if you want to add something more than just a simple text content. The 8theme Layout Options section allows you to set specific options to make your page look in the best way. Detailed information you can find in *4.2. 8theme Layout settings*. Preview the page one last time, then click *Publish*. You've added a new page to your WordPress site.

## 5.2. Contact Page

If you want to receive feedback from your visitors, having a Contact Us page on your site is an easy way to achieve that. Go to *Pages > Add new* and create a page called "Contact Us" (or whatever you want your contacts page called). To add contact form use Contact Form 7 plugin (<https://wordpress.org/plugins/contact-form-7/>).

## 5.3. Portfolio Page

You may also use our theme as a Portfolio. It is the perfect way to share your artwork, photography, or anything visual you want to show off. Create Portfolio Page and set the page template (under *Page Attributes*) to *Portfolio*. It will be the main page with all your projects. Then go to *8Theme Options > Blog & Portfolio > Portfolio* and set necessary options. You may create New Projects at *Portfolio > Add New*.

Page Attributes

Parent

(no parent) ▼

Template

Portfolio ▼

## 5.4. Blank Page

XStore includes Blank Page template that allows you to build pages without showing the header or footer. They are perfect to create a landing page design or for such pages like "Maintenance Mode" or "Coming Soon". You can use all the same page options and the element for content.

## 5.5. Blog Page

By default, WordPress displays your content in a blog format on the homepage. But if you want to create a separate page for blog posts just for the following:

- Navigate to *Pages > Add New*. You can title this page as Blog.
- Then go to *Settings > Reading* and under the *Front page displays* option choose *A static page*.
- Below that choose the page to be used as the front page and the page for your blog posts. Save your changes, and load your site to review them.

# Menu

## 6.1. General Information

XStore supports custom WordPress menu. Custom menus may contain links to pages, categories, custom links or other content types. If you want to add special things to the menu like posts and posts categories, portfolio categories, classes for links, etc then please click on *Screen options* button in the right top corner where you'll be able to choose much more options that can be used for menu items.

There is no limit in our theme on how many menus you can create. XStore theme includes 2 menu location: main and mobile menu. In section *Theme Locations* you can choose which custom menu to associate with each location.

To create new menu navigate to *Dashboard > Appearance > Menus* page and press on *create a new menu* link. Now you can add Pages, Posts and Custom Links from blocks located on the left. When you have your menu items arranged in order click on *Save Menu*.

## XStore Menu Options

XStore theme has a number of additional settings to create the menu. Options change depending on menu item level.

- **Disable navigation labels** - allows you disable menu titles (1st, 2nd levels).
- **Design** - allows you to choose menu type (1st level) or set custom link item like image column (2nd, 3rd levels).
- **Columns** - set number of columns if Mega Menu design type is selected (1st level).
- **Column width** - you may control the width of every column inside Mega Menu by entering a percentage. 100% is equivalent to the sum of default column values (1 column - 185px) that you set in **Column**;
- **Widget area** - you may use widget area with custom content.
- **Icon name** - each menu item can have a font awesome icon (<http://fontawesome.github.io/Font-Awesome/icons/>). Use font awesome class in the name. Ex: fa fa-connectdevelop.
- **Label** - you can apply the label for your menu item: new, sale, hot.
- **Menu item image** - if you want to use the image for menu just upload image file and set menu position. You can use image like background for the menu item or like separate image column.

**Important note:** you need to save menu after adding menu items to display the theme settings for the menu!

## 6.2. Mega Menu

Mega Menu is one of menu types of XStore theme.

To create last row ( shipping information ) navigate to *Static Blocks* > create Static Block with 3 columns layout and use Icon, Text VC elements. You may change margins, paddings, add background color if you need. After that go to *Appearance* > *Widgets* and create *Custom Widget area*. Add *8theme - Static Block widget* and choose static block area you just created. Go to *Appearance* > *Menus* and in last custom link item set the following options: Disable navigation label, Column width - 100%, Widget area - choose your menu custom widget area.

Save and check the frontend.

## Slider

Theme supports Revolution (<http://themepunch.com/revolution/>) Slider, the installation of which would be provided for you after theme activation. After that, you may create the sliders and use them on the site according to the plugin documentation. Documentation from the authors of the slider you can find here (<http://www.themepunch.com/revslider-doc/slider-revolution-documentation/>). Please, refer to it for further information about slider settings. Sliders can be added to any page.

To setup Revolution Slider, please, follow the next steps:

1. If you already have import file you may import the archives. Examples of sliders you can find in **XML files** folder.
  - Navigate to **Revolution Slider**.
  - Press on **Import Slider**.
  - Upload an archive and press **Import Slider** button.
2. If you want to create new slider navigate to **Revolution Slider > New Slider**.
  - After that, you will reach a form where you are prompted to enter the Sliders Basic Settings.
  - The next step is creating/editing slides. Insert the slider content.
  - Include the Slider in our theme: from the widgets panel (drag the "Revolution Slider" widget to the desired sidebar) or from the post editor (insert the shortcode from the sliders table) or add RevolutionSlider element if you build your page using Visual Composer.

## E-Commerce

XStore is compatible with WooCommerce and includes design integration as well as custom shortcodes. WooCommerce is external plugin and theme documentation includes only basic information to get started. Below you can find links that have additional information about using WooCommerce.

- [WooCommerce Plugin Page \(http://www.woothemes.com/woocommerce/\)](http://www.woothemes.com/woocommerce/) – official WooCommerce plugin page.
- [WooCommerce Documentation \(http://docs.woothemes.com/documentation/plugins/woocommerce/woocommerce-user-guide/getting-started/\)](http://docs.woothemes.com/documentation/plugins/woocommerce/woocommerce-user-guide/getting-started/) – WooCommerce Online documentation created by WooThemes
- [WooCommerce Forums \(http://wordpress.org/support/plugin/woocommerce\)](http://wordpress.org/support/plugin/woocommerce) – the community forum for WooCommerce plugin created by WooThemes
- [WooCommerce Shortcodes \(http://docs.woothemes.com/document/woocommerce-shortcodes/\)](http://docs.woothemes.com/document/woocommerce-shortcodes/) – shortcodes for WooCommerce, theme custom shortcodes are not included in this.

## Translation

### 10.1. Base theme translation

#### Using PoEdit

The translation file default.pot you can find in Translation Files folder in theme package. Edit the .po file using POEdit (<http://www.poedit.net/>), use the translation field to make replacements. Read here (<http://betterwp.net/wordpress-tips/create-pot-file-using-poedit/>) how to do it right.

From the file menu, save file with your language name e.g de\_DE.po. It will generate both a .po and .mo files for your translation. Place these files into languages folder /wp-content/themes/xstore/languages.

#### Using Loco Translate plugin

Go to Plugins > Add new > install and activate Loco Translate plugin (<https://wordpress.org/plugins/loco-translate/>)

Go to Loco Translate > Themes > select XStore theme. Press "Add new language". Translate strings and Save.

Overview Setup **Advanced**

## Initializing new translations in "xstore"

655 strings found in xstore.pot

### Choose a language:

WordPress language:  Custom language:

 Spanish (Spain)

### Choose a location:

Author:  themes/xstore/languages/es\_ES.po

Custom:  languages/loco/themes/xstore-es\_ES.po

System:  languages/themes/xstore-es\_ES.po

 **Spanish (Spain) translation:**

In case you already have translation files place them in wp-content/languages/themes/ folder. Use xstore prefix, for example xstore-es\_ES.po.

## 10.2. Translation with WPML

### General setup

XStore is WPML compatible theme that means you may translate template to the language you need. To start you need to purchase a recent version of WPML (<http://wpml.org/purchase/>), including the String Translation and Translation Management modules.

Follow Getting Started Guide (<http://wpml.org/documentation/getting-started-guide/>) after core WPML plugins installation.

To begin translation go to WPML > *Theme and Plugin Localization*. Click on *Scan the theme for strings* and you will see theme strings and which ones are translated or not. Then select WPML > *String translation* and a list of the strings in the theme will be available. Choose the string you need to translate and press translation link to add translations to languages.

### Translating Projects, Skills, and Testimonials

To translate the custom post types and taxonomies (static blocks, projects, testimonials), go to WPML > *Translation Management*. Select *Multilingual Content Management*.

Navigate to *Custom Posts* where you can choose the translations for Projects, Static Blocks, Testimonials.

Navigate to *Custom taxonomies* below, you'll be able to choose the translations for Brands and Portfolio Categories.

---

## Child Theme

XStore fully supports Child Theme.

A WordPress child theme is a theme that inherits the functionality of the parent theme. With child theme, you can make the modification or add additional functionality to the parent theme. A child theme is a safest and easiest way to modify an existing theme, whether you want to make a few tiny changes or extensive changes.

We have already created and included child theme in theme package. You just need to find xstore-child folder in theme package and upload it to /wp-content/themes/ folder.
